

Latvia

The map above show predicted concentrations of a reference compound in ditches adjacent to fields where winter wheat is grown (concentrations in $\mu\text{g/l}$).
In the present example, the presence of the compound is assumed to originate from transport by surface runoff and erosion.

■ No data	■ 0.001-0.01 $\mu\text{g/l}$	■ 0.1-1 $\mu\text{g/l}$	■ > 10 $\mu\text{g/l}$
■ < 0.001 $\mu\text{g/l}$	■ 0.01-0.1 $\mu\text{g/l}$	■ 1-10 $\mu\text{g/l}$
